POSTDOCTORAL POSITIONS AVAILABLE

with Prof. Anant K. Menon at Weill Medical College of Cornell University

The laboratory is interested in the cell biology and biochemistry of lipid synthesis and intracellular transport. Positions are available for work on:

- **Genetic and biochemical analysis of sterol transport between the endoplasmic reticulum and plasma membrane in yeast.**
- **Biosynthesis of glycosylphosphatidylinositol (GPI) - anchored proteins in mammalian cells** with particular emphasis on the structural basis of the GPI anchoring reaction and the flipping of GPI intermediates across the ER during GPI biosynthesis.

Experience in molecular cell biology including molecular biology, yeast genetics, subcellular fractionation, protein expression and purification, membrane biochemistry and/or lipid biochemistry is preferred.

**How to apply:** Please e-mail a letter outlining the research area of interest; please include a cv, plus the names, affiliations and e-mail addresses of 2-3 referees to Prof. Anant Menon at akm2003@med.cornell.edu.

**Some recent publications illustrating the research areas listed above:**
